

Trellix User Interview

User Interview

Date: April 15, 2026

Interviewer: Issa El Mokadem (Developer)

Interviewee: Carlos - Project Manager at a small company

Interview Summary

i This fictional interview aims to identify the planned features of the Trellix project based on a typical user's needs.

Interview Development

Question 1	How do you currently manage your projects?
Answer	Carlos: "I use a combination of paper and some digital tools, but I struggle to keep everything organized. I need something visual where I can see the progress of my tasks."
Question 2	What features are most important to you in a management tool?

Answer	Carlos: "Being able to create different boards for each project, having lists within each board to organize by phases, and being able to move tasks easily between those phases. I also need to be able to assign due dates to tasks."
---------------	--

Question 3	Who manages access to your project management tools?
Answer	Carlos: "As project manager, I'm the one who controls access. I need a secure login system so only my team can enter, and an admin panel where I can manage users — deactivate accounts when someone leaves, or remove them entirely."

Question 4	Do you use any integration with external tools?
Answer	Carlos: "I like to have contextual information in my tasks. For example, weather can affect construction projects."

Planned Project Features

ID	Feature	Status	Description
----	---------	--------	-------------

F-001	Board Creation	DONE	Users can create multiple boards to organize different projects.
F-002	Lists within Boards	DONE	Each board can contain multiple lists to organize by phases (To Do, Doing, Done).
F-003	Cards in Lists	DONE	Tasks are represented as cards within lists.
F-004	Due Date	NOT IMPLEMENTED	Each card can have a due date assigned.
F-005	JWT Authentication	DONE	Secure registration and login system with JWT tokens.
F-006	Roles (Admin/User)	DONE	RBAC system with administrator and user roles.
F-007	Weather Widget	DONE	Sidebar widget displays current weather for a configurable city via open-meteo API
F-008	REST API	DONE	Backend with FastAPI exposing

			endpoints for all CRUD operations.
F-009	Frontend React + Vite	DONE	Modern user interface with React and Vite.
F-010	Responsive Design (Tailwind)	DONE	Responsive interface using Tailwind CSS.
F-011	Docker Containers	DONE	Containerized architecture with Docker Compose (nginx, backend, frontend, mariadb).
F-012	Drag & Drop	DONE	Cards can be dragged between lists to change status.

Conclusions

The **Trellix** project addresses the needs expressed by the user through the following planned features:

- Visual project management through boards, lists, and cards
- Secure authentication system with role-based access control
- Integration with external data (weather) for additional context
- Modern and scalable architecture
